

BI-WEEKLY MEETING ON
MAGELLANIC CLOUDS
04.04.2024

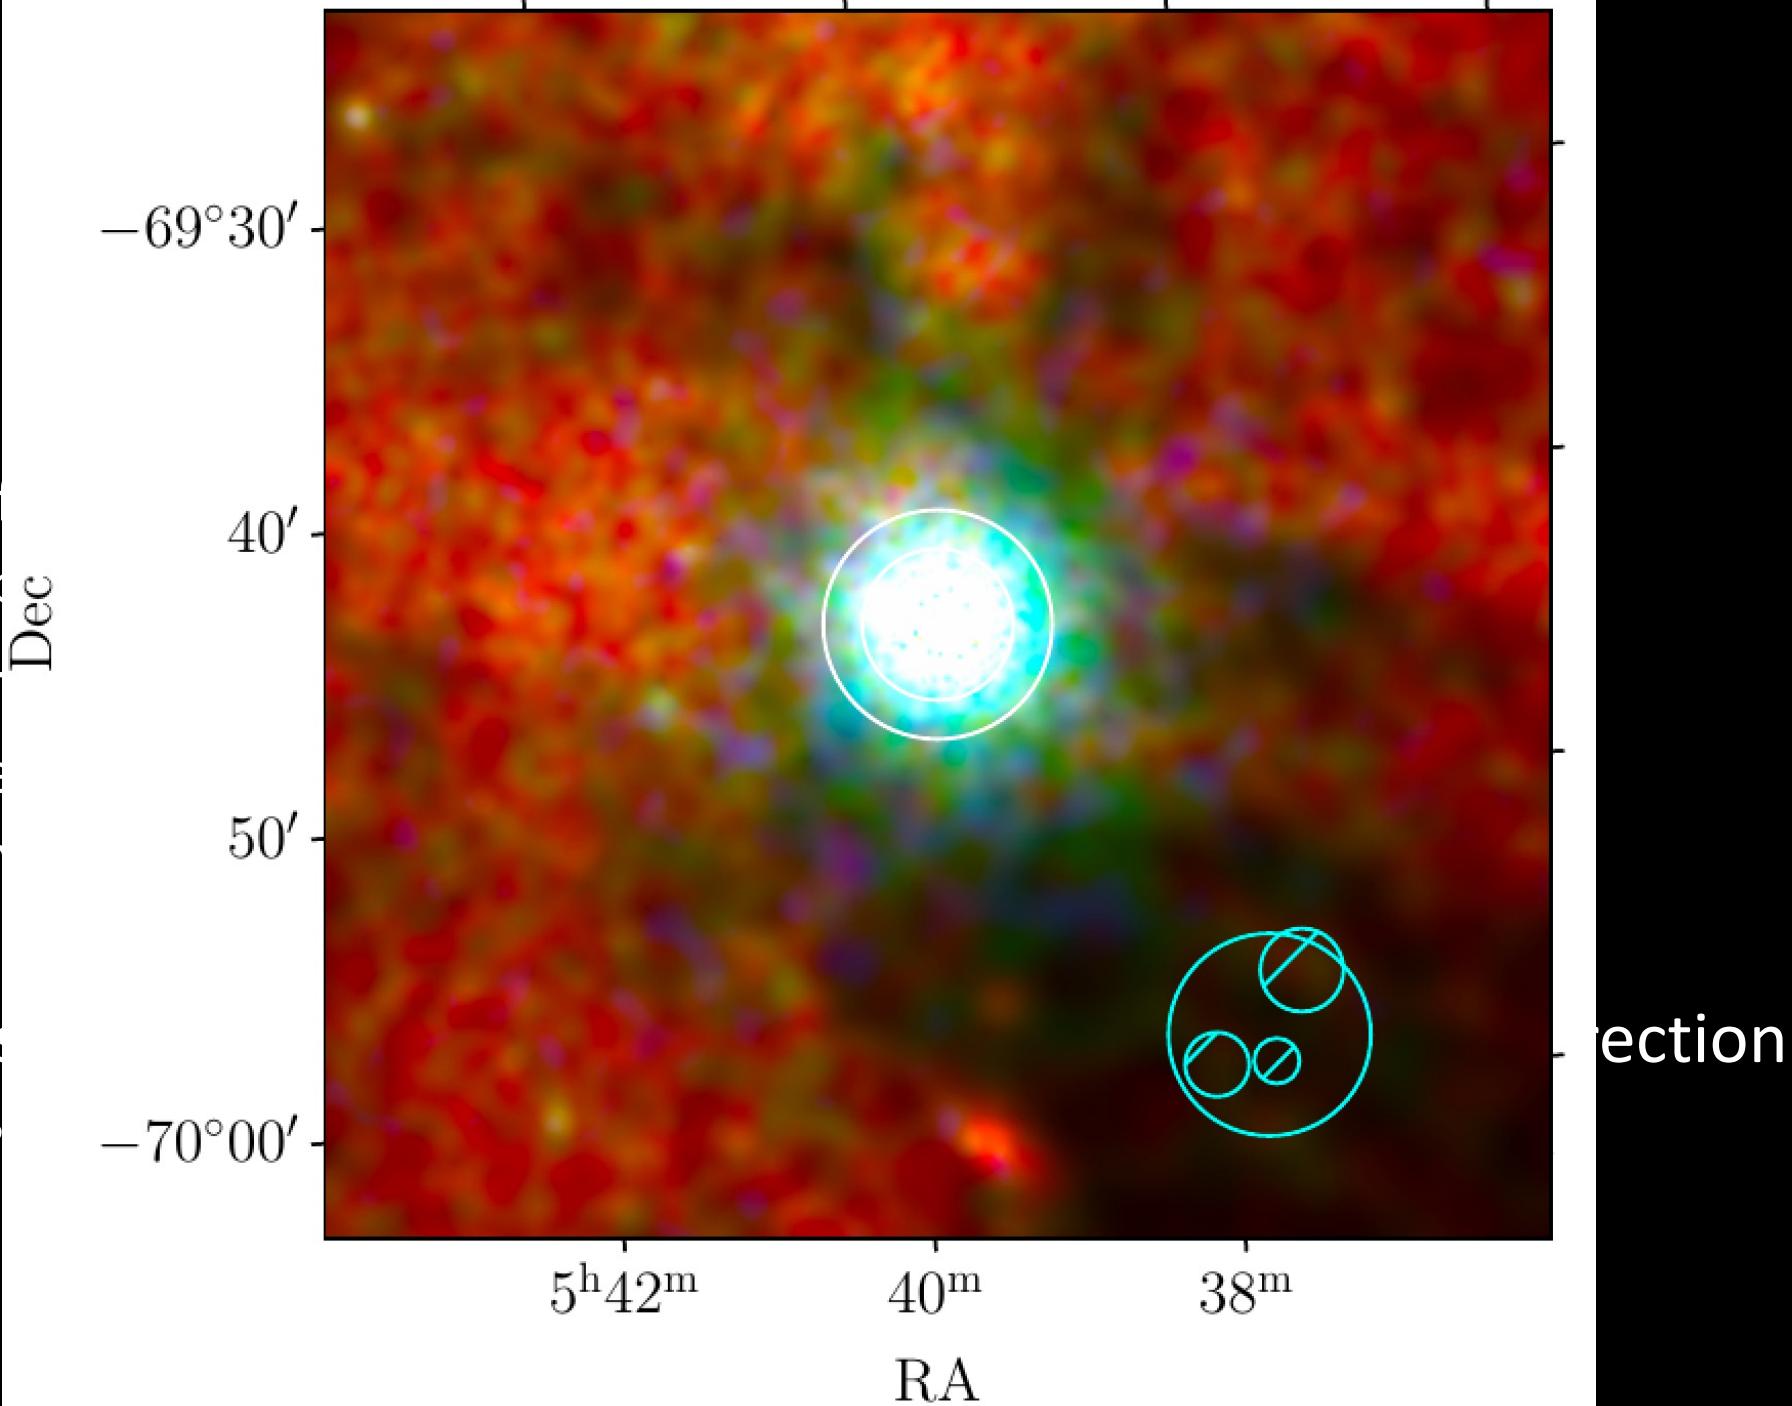

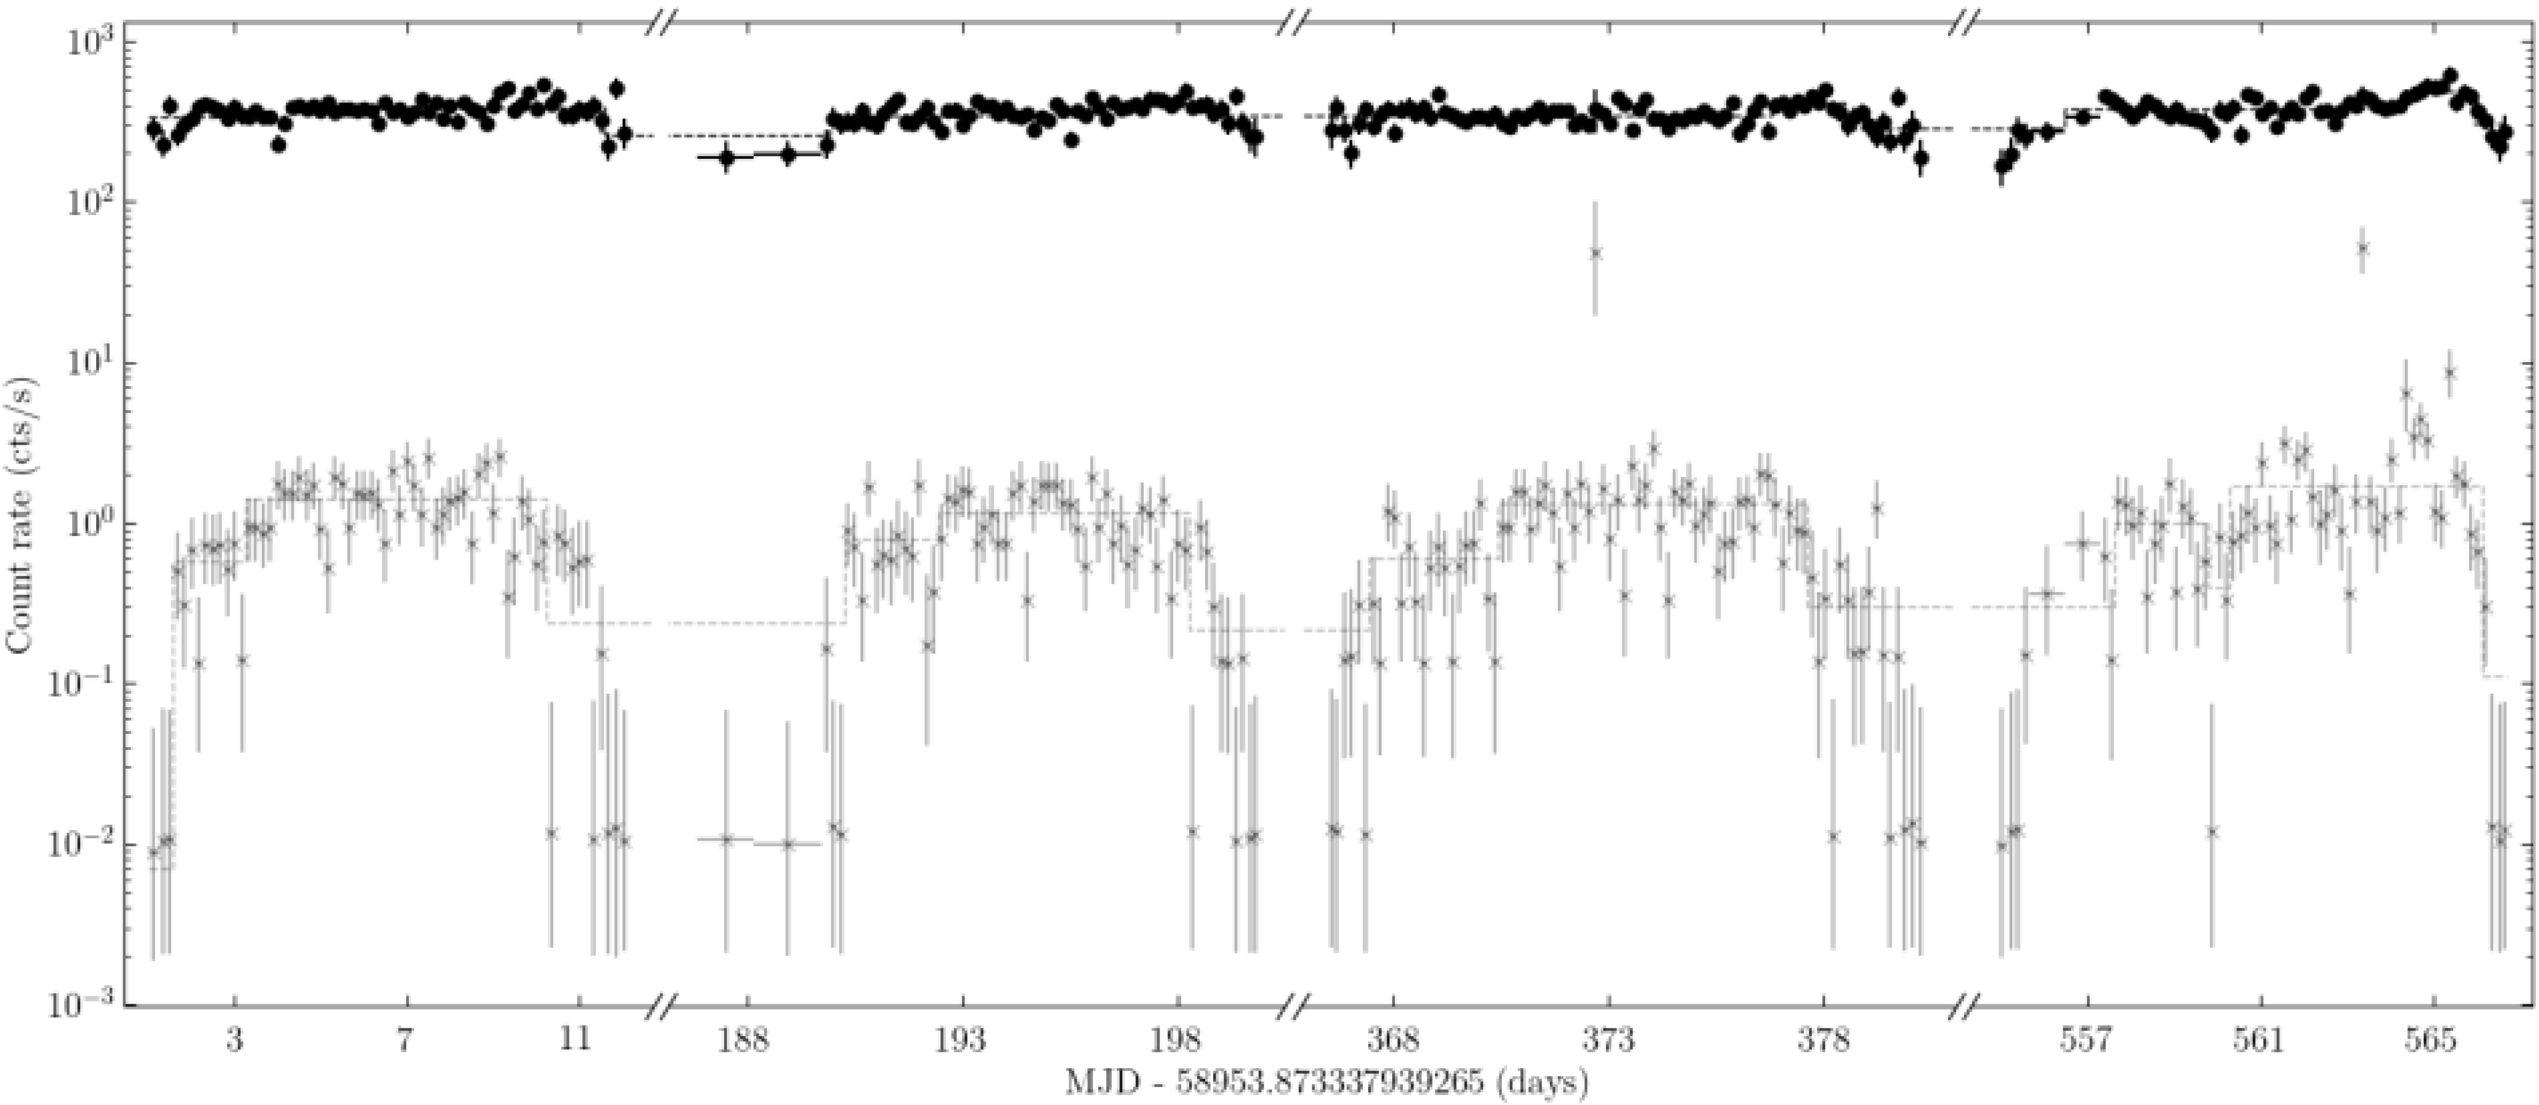

Update on Package

- All data products extracted
 - Modifying individual spectral models left open for now
 - Set up script to always run 3 at once - takes ~1 day for all
- Problem with LMC X-1,3,4 solved
 - Caused by highly variable bkg fraction
 - For those more important to chose bkg region in scan direction
 - Used cheese like bkg region (holes; see example LMC X-1)
- Overall set new bkg regions for all objects – for most scan direction was possible

Update

- All data
 - Modified
 - Set up
- Problem
 - Cause
 - For th
 - Used
- Overall s
was pos

Current Work

- Mostly worked on paper
 - Data analysis draft done
 - Now working on Instruments
- Some bug fixing on package since Adrien started testing it for his source
